

Technologiekring in Apeldoorn

Andreas Faul handling virgin fibers...

...and deinkability matters

In June, more than 70 paper experts met at Technologiekring in Apeldoorn. Technologiekring is a regular event organised by VAPA, the training center for the Dutch paper, board and corrugated board industry and the company Millvision. The focus of this event was on raw material and stock preparation. Andreas Faul was invited to talk about the liquid toner case at an INGEDE member mill which had

happened in 2010. We decided to add also the issues in inkjet deinking and the co-operation with the DPDA which handles this subject. The evening program featured not only hand papermaking but also the occasion to establish promising contacts. The next Technologiekring will take place from 23 to 24 Nov 2011 with the focus on papermachine and product.

INKday conference series – insiders come to Siegwirk for current infos and trends in the printing world

On June 9 and 10, the main event of the successful INKday series for Siegwirk's customers and business partners took place in Siegburg. Over 300 participants from various countries came to Siegwirk headquarters to get the latest news from the world of printing, to find out about innovations and know-

how. Leading experts from the trade, consumer, brand article, package printing and printing ink sectors came to contribute. The event also marked the 100th anniversary of the brand 'Siegwerk'. "It was a full success," said CEO Herbert Forker. "Instead of normal anniversary celebrations, we offered exciting discussions on future-oriented topics to our partners." There was a block of presentations followed by so-called INKtalks – discussion groups moderated by Siegwirk experts – offered a more interactive type of communication. There were 26 workshop topics to choose from, ranging from sustainability to low migration and ink depot management, from intelligent

packaging to the future of newspaper printing and special effect inks, from high-speed printing to the digital future and the synergies between print and online media (i.e. augmented reality). On June 10, participants also had the oppor-

tunity to tour the Siegwerk premises, featuring the biggest printing ink production center in the world and the newly opened company's own museum – thus taking an in-depth look at the worlds of Siegwerk and printing technology.

In the course of the sustainability workshop Dr. Klaus Peters of Siegwerk gave the group an introduction to deinking and Jens Winter from INGEDE performed its demonstration.

Five Years of Raising the Bar in Paper Recycling

European Paper Recycling in 2010 at 68.9%

The European paper recycling rate reached an impressive 68.9% as announced by the ERPC (European Re-covered Paper Council) in their final monitoring report. The report shows that since 2004 the recycling rate has increased by 10% points due in part to the excellent work of the ERPC.

The 2010 European paper recycling rate of 68.9% is higher than the target set by the European paper industry for the ERPC commitment period of the 2nd European Paper Recycling Declaration 2006-2010. The council is proud to report on impressive work completed, following the pledge it first made in

2000 to increase paper recycling in Europe. In the mean time, a new ambitious commitment for 2011-2015 is being prepared, keeping the industry on its path to meet

ed the calculation of the recycling rate using the International Standard on assurance Engagements ISAE 3000.

In addition to the quantitative progress, a lot of qualitative work was done to establish an eco-design towards improved recyclability and in the area of waste prevention. The past five years gave the ERPC an opportunity to learn how to work better together, growing stronger as a value chain.

The results include pioneering work to give recycling a solid and scientific support, such as the adoption of the deinkability scorecard. The efforts of the ERPC also complement EU policy, for instance the new Waste Directive adopted in

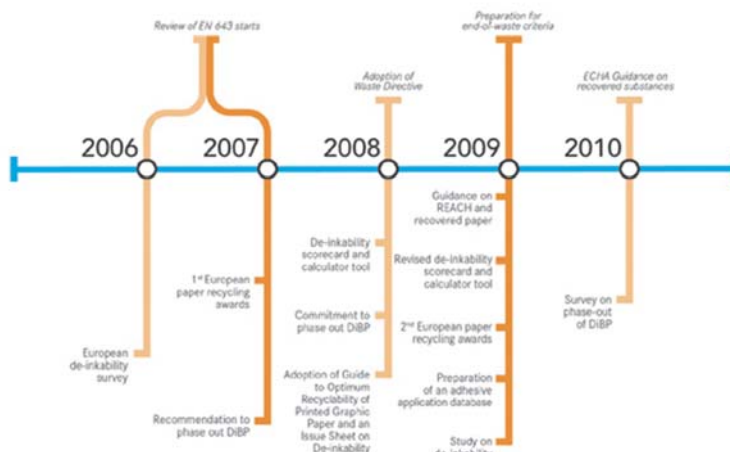

2008.

When looking on these developments, we can proudly state that the INGEDE initiated 6 of the 12 displayed activities.
