

European Declaration on Paper Recycling

Four enabling conditions

- 1. Renewable Energy Policy**
Support schemes for the use of renewable energy sources must not lead to burning paper
- 2. Separate Collection of Paper**
The provisions of the Waste Directive with respect to separate collection must be implemented and enforced throughout Europe
- 3. External Trade of Paper for Recycling**
The increase in the collection of paper must be higher than the increase in the external net trade of paper for recycling
- 4. Recyclability**
Conflicting policies and legislation preventing paper products from being recycled should be reviewed
